Re: Break-Safe® Model AI-6

Bulletin 1 – June 2007

Transpo Engineering has made the following change to the assembly drawings for the AI-6 Break-Safe system. The breakaway hinge location has been modified so that the distance from the hinge to the rolled edge of the post flanges will be 1 1/8" (28.6mm). This represents an increase from the previously recommended 1/2" (12.7mm). Please find the updated AI-6 installation drawing attached. This location change will enhance the performance of the hinge.

For more information, visit the Transpo website: <http://www.transpo.com/AI6.htm>
