

Transpo Industries, Inc. and E-Bond Epoxies Inc. announce that the two companies have entered into a multi-state marketing agreement

New Rochelle, NY, April 26, 2011 - Transpo will be responsible for marketing E-Bond's 526 Epoxy Multi-Layer Rapid Set Skid-Resistant Polymer Concrete for Bridge and Parking Decks in 36 states across the U.S.

In use for over 25 years, the 526 overlay has been used on over 12 million square feet of bridge deck overlays in the U.S. alone.

The superior physical properties of E-Bond's 526 Epoxy and its unique ability to cure quickly in lower temperatures make the 526 overlay material stand out as a cost effective solution for many of today's overlay projects with very limited construction hours.

Transpo is well established in the field of transportation. The company's reputation as an expert in rehabilitation, preservation and maintenance of bridge decks has helped Transpo become a leading supplier of new technology materials. Transpo currently manufactures Polysulfide Epoxy Slurry and Methyl Methacrylate Slurry Overlay Systems as well as other polymer concrete products. The addition of the E-Bond 526 overlay to their already extensive line of polymer concrete materials and products will enable Transpo to supply material that can meet specification requirements for virtually any overlay project.

PRESS RELEASE

About Transpo Industries, Inc.

Transpo Industries Inc. has been an innovative leader in the manufacture and distribution of roadway safety products and materials for the U.S. and International transportation industry since 1968.

Transpo's products include Polymer concrete materials for the maintenance, rehabilitation and preservation of concrete and steel bridge decks, airport runways, and parking garages; Safety Products: Omni-Directional Breakaway supports for sign posts and light poles, Jet-Blast Fencing, Highway Glare Screens and a Work Zone intrusion alarm, and Pre-Cast Polymer Concrete products: Barrier panels with white delineation and retro-reflective stripe for roads, tunnels and bridges; ADA Compliant tactile dome, detectable warning tiles and a Highway Grade Railroad Crossing System.

Transpo maintains an ISO 9001:2008 certification at all company facilities.
