Yodock® Construction Solutions

The Yodock® brand offers a full line of innovative construction site products centered on the patented, water-filled barricades known as the Yodock model 2001, 2001M, and 2001MB. They are made in the USA and fully tested to NCHRP Report 350 requirements.

Yodock barricades can be assembled to meet a variety of construction site needs, including traffic control, perimeter fencing, temporary sign support, work zone barricade, and pedestrian walkways.

Yodock barricades are a convenient alternative to other products and when ballasted by water, are less susceptible to movement by wind, pedestrians, or motorists than chain-link fences, drums, and cones. Interlocking sections can be configured to accommodate multi-phase projects and various terrains. Flexible rental options can help reduce capital costs and storage concerns over time.

VERSATILE & DURABLE

Features

- Light weight units for convenient positioning by hand – no heavy equipment required.
- Stackable for efficient transportation and storage.
- Forklift access for maneuverability.
- Custom colors are available.

FHWA Acceptances

- Longitudinal Channelizing Device (LCD)
- Work Zone Barricade
- Temporary Sign Support

Construction Site Containment

Traffic Delineation

Garage & Parking Lots

Perimeter Fencing

Lane Closures

Pedestrian Walkways
